

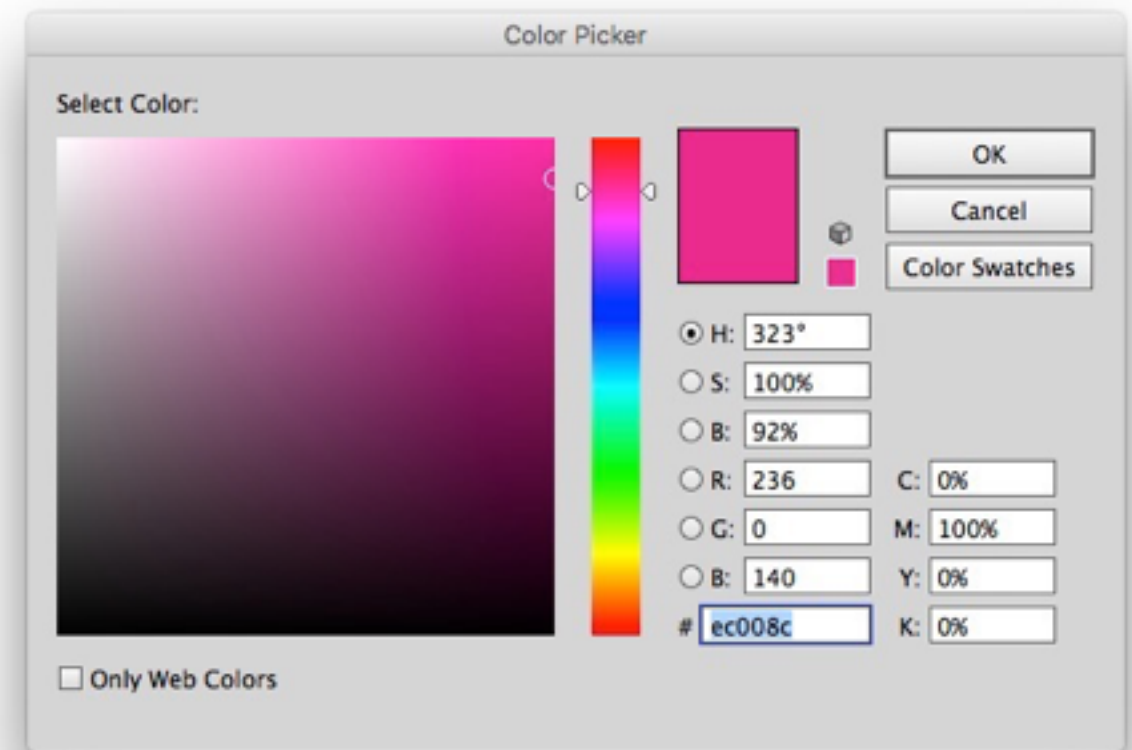

Graphics Guide for Printing

You have received one photoshop file, one illustrator file and one jpg for each sticker.

1. Create your artwork in the Photoshop file, placing it inside the artwork folder and save.
2. Create a flat cmyk jpg file from the Photoshop file.
3. Place the jpg on the artwork layer of the Illustrator file. The illustrator file already has the CutContour layer used by the printer.
4. Save as an **EPS (CS2)** file and send back for printing. Make sure the the linked files are embedded.

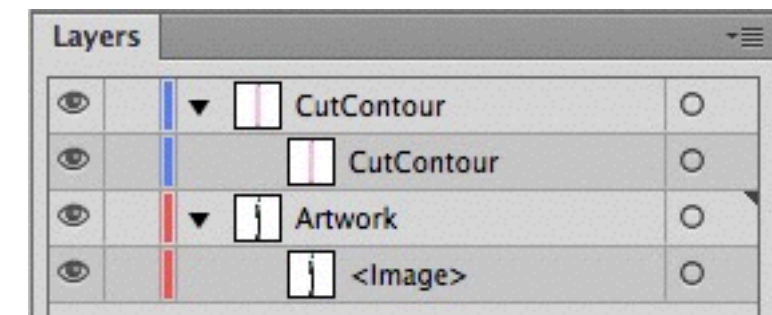

For safety you can also send along the source files.

Cutting shape stroke is 100% Magenta

Cutting shape is 0.25 pt

Cutting shape and artwork need separate layers

Save in EPS CS2 format
